QBP Pathway Improvements launching on Monday, August 21st!

This Monday, after months of coordination between staff and physicians and the QBP team and extensive patient engagement, Windsor Regional Hospital is rolling out the QBP Pathway Improvement Program. This will start with newly admitted patients with primary diagnoses of **COPD, Community Acquired Pneumonia, CHF, Ischemic Stroke and Hip Fracture.**

Now, when someone is diagnosed with any of the above conditions, a standardized care plan is put in motion so that everyone – clinical staff, physicians, patients and family members – are all on the same page and know what to expect throughout the patient journey. The program includes best practice medical orders (Order Sets), guides to care (Clinical Pathways) and patient and family information (Patient Experience Pathways) which will improve care for patients. In a trial with stroke patients on 8W this new standard of care has resulted in patients staying for an average of one day less in hospital.

Training has taken place in all units that will be part of the program. If you have any questions as these new processes and document are launched, please reach out to your Manager or Clinical Practice Manager.

Have a great weekend!
