

SOP UPDATES

Standardization & Optimization Process

October 16, 2015

Working as a Group on Improvements

The ICU team, supported by a cross section of people from ED, had a very fruitful discussion during last Thursday's mapping of the process for patients being admitted to the ICU from ED. The ED group was very engaged and they came up with suggestions related to streamlining the information flow when a patient is bound for the ICU, and starting the clock on tracking to the 90min target. . The changes still need to be discussed with their ED colleagues but we applaud their initiative and eagerness to start testing a better method.

Learning from Each Other

Here we see some of the OR Turnaround Team from WRO reviewing the overall plan for standardizing their OR suite room layout. The standard layout was put in place last Monday, October 5, at the Ouellette Campus. Learning from their teammates at WRM and hoping to avoid some of the struggles experienced when the Met campus introduced a standardized room layout in September, the team at WRO rolled out the trial to all the orthopedic procedures. So far our first week is showing some promising results!

Have a great weekend!!
