

TELEMEDICINE PROGRAM

Telemedicine is the use of two-way videoconferencing equipment to deliver patient assessments, follow-up appointments and physician consults. Telemedicine is useful for many types of appointments. Your patient will have the opportunity to see, hear and speak with a health care specialist and discuss their plan of care.

BENEFITS OF TELEMEDICINE

- Reduces the time, cost and risk of travel for individuals, families and care providers.
- Enables the opportunities to receive specialized services from across the region without having to leave your community.
- Facilitates improved healthcare coordination and continuity of care across the healthcare system.
- The video technology used for telemedicine allows for greater access to health services across Ontario, while maintaining privacy and confidentiality

Windsor Regional Hospital offers Telemedicine through a secure network provided by Ontario Telemedicine Network, which is available in hundreds of sites across Ontario.

**If you think your patient could benefit from Telemedicine please contact one of our
Telemedicine Nurses:**
